

AlumiRamp

AlumiRamp. Let's roll.

bridging the gap.

Looking for more color in your life?

The ALUMILITE LANDSCAPE COLLECTION has all the features of our standard ALUMILITE series with durable powder coated finishes to enhance your home. Available in four colors designed to blend with natural materials such as slate, brick, wood or concrete.

Thinking of moving?

The ARMADA SYSTEM is a residential modular ramp which can easily be moved or reconfigured if you have to relocate. Made of anodized aluminum, it will remain good looking through years of use. This system complies with ANSI and ADA guidelines.

Company coming?

The ALUMILITE solid is ideal for use as a short fixed ramp or for temporary needs. All welded aluminum construction with a permanent non-skid surface. When more portability is needed the ALUMILITE folding is recommended.

Ready to go?

The READY RAMP is ready when you are. Unfolds to its full size in 3 easy steps. Folds compactly for storage. Construction is welded aluminum with a black non-skid surface.

One small step?

The low profile aluminum THRESHOLD RAMP is ideal for use at doorways and thresholds from 1" to 4" in height. The 2" top lip seamlessly covers the existing threshold for a smooth transition and adjusts to varying heights. The welded construction and permanent skid resistant surface allow these ramps to be used inside or outside.

Sliding door slowing you down?

The RUBBER THRESHOLD RAMP is made of recycled rubber and can be used for thresholds up to 2½". This design is especially useful for sliding doors or doors that fit tightly in their frame as it does not cross the threshold. All sizes come with tapered edges and a molded slip resistant surface.

Want to do it yourself?

AlumiRamp's QUICK RAMP SYSTEM is a pre-engineered kit designed to combine the economic savings of wood with the strength and ease of our modular aluminum systems. With these kits, an individual can quickly and easily build and install a full ramp system. Instructions are included that provide ADA guidelines, handrail options, and cut lists for the required lumber. A truly economical option that is easier than designing from scratch in all wood.
